

Jonathan Cahal

Phoenix, AZ · (602) 576-0305 · jacahal@gmail.com · jcahal.github.io · linkedin.com/in/jonathan-cahal

IT professional with 13 years of hands-on experience and a background in data analysis. Currently completing a Professional Certificate in Applied AI and Data Science through MIT Professional Education (May 2026). My goal is to transition into AI/ML full time — ideally remote.

EXPERIENCE

Champion Schools

2012 – Present

IT Director

- Built and scaled the organization's IT department from the ground up, growing from zero infrastructure to a multi-site operation supporting 120 staff and 1,500 students across 3 locations.
- Authored and secured \$1.1M+ in technology grants — identifying funding opportunities, writing proposals independently, and managing award allocation across network infrastructure and hardware.
- Analyze student enrollment and retention data year-over-year, identifying trends that directly influenced leadership's decision to increase marketing investment.
- Use GA4 to track and correlate web traffic patterns with active marketing campaigns, providing data-backed validation of campaign timing and effectiveness.

Pear, LLC

2015 – Present

Founder & President

- Founded and operate a small web services company offering SaaS solutions and custom web design.
- Designed and developed client websites end-to-end, handling everything from architecture to deployment.
- Built and maintain a live SaaS product independently, managing all development, infrastructure, and client relationships.

PROJECTS

E-Rate Scout

Full-stack SaaS platform for exploring and monitoring the FCC's E-Rate program. Search millions of data points across forms, entities, and providers with real-time filters, interactive visualizations, and daily change alerts.

Vue.js · Appwrite · Fullstack · SaaS · Production

CSV Data Pipeline

Locally configurable ETL pipeline built with OOP and a CLI interface. Handles validation, null removal, normalization, and encoding.

Python · pandas · OOP · CLI · argparse

incoGNITO

Self-destructing secret message app. Messages are encrypted and permanently deleted on first read. Built with Vue.js, Express, and MongoDB.

Vue.js · Node.js · MongoDB · Fullstack

ANSR Ascend Project (NASA Space Grant)

As lead firmware engineer, designed and developed sensory, recording, and communications systems for a high-altitude balloon payload — collecting the most data points in program history.

C/C++ · Embedded Systems · Firmware · Sensors

EDUCATION

MIT Professional Education

January 2026 – May 2026

Professional Certificate – Applied AI and Data Science

In Progress

Arizona State University
B.S. Computer Systems Engineering
Magna Cum Laude · 3.75 GPA

2021

SKILLS

Languages & Frameworks: JavaScript, Python, C/C++, Java, Vue.js, NodeJS, HTML/CSS

Infrastructure & Tools: Git, Docker, MongoDB, SQL, WordPress, Networking, Embedded Linux

Currently Developing: *PyTorch, scikit-learn, FastAPI, MLflow*
